I've recently decided to attempt to keep all of my notes and everything I've learned in a [Zettelkasten](#). After reading [Daryl Sun's blog post](#), I started looking more into the method and found it *incredibly* intriguing. I've tried the "Evernote way" of throwing everything I come across in a single place but it inevitable gets lost. I don't remember what it was called but I tried another app that actually tags your files and organises them in a nice manner. This worked well for the most part but the graphical client was badly optimised Electron and *very* heavy. I've also tried keeping notes in books but I was never really able to keep up with any of it. The thing that is especially compelling about a Zettelkasten is that I put *everything* I learn in a single text file but link around to as many different ideas as I can, drawing my *own* connections for me to rediscover later on.

Because it's all in a simple text file, I'm also able to create a keybinding in [Sway](#) that will open it in Vim, jump to the bottom, and have a nice markdown environment ready for me to write in. It did take a bit of configuration and looking around for different plugins but I'm very happy with what I have so far.

The first thing is telling Vim to treat all `.md` files as Markdown

```
1 " Treat all .md files as markdown
2 autocmd BufNewFile,BufRead *.md set filetype=markdown
```

Visuals

In a long text file with a great many lines, it can be useful to find your cursor quickly without having to search around the screen for it.

```
1 " Highlight the line the cursor is on
2 autocmd FileType markdown set cursorline
```

It can also be nice to not see a ton of `[links](https://example.com)` and **bold** or *italic* text everywhere. Sure, my eye has gotten used to it but still. I'd rather have my terminal actually render bold text as bold.

```
1 " Hide and format markdown elements like bold
2 autocmd FileType markdown set conceallevel=2
```

If you use the `vim-markdown` plugin mentioned further on, I recommend using its option for concealing rather than Vim's.

Spell check

One of the things every good editor needs is spell check and Vim is no exception. This line enables spell check with British English for all markdown files.

```
1 " Set spell check to British English
2 autocmd FileType markdown setlocal spell spelllang=en_gb
```

Here's a short crash course in Vim spelling commands: - `[s` to search for misspelled words above the cursor - `]s` to search for misspelled words below the cursor - `z=` to see replacement suggestions - `zg` to add the word to your dictionary

Goyo

The very first component is something I use across *all* markdown files. `Goyo` is one of the first plugins I install on any machine I'll be writing with. It enables a "distraction-free writing environment" and I absolutely love it. It disables pretty much all visual elements in Vim except for what mode you're in: visual, command, insert, etc. I have a keybinding set to quickly open/close Goyo because there is an odd issue when I switch workspaces to and away from Vim. With two taps of `Ctrl+g`, it's back to normal.

```
1 nnoremap <C-g> :Goyo<CR>
```

Another line in my Vim config automatically opens Goyo for all markdown files:

```
1 autocmd FileType markdown Goyo
```

vim-markdown

That latest plugin I installed is [vim-markdown](#) and it is *wonderful*. I really recommend reading about all of the options but here's what I have set.

```
1 " Configuration for vim-markdown
2 let g:vim_markdown_conceal = 2
3 let g:vim_markdown_conceal_code_blocks = 0
4 let g:vim_markdown_math = 1
5 let g:vim_markdown_toml_frontmatter = 1
6 let g:vim_markdown_frontmatter = 1
7 let g:vim_markdown_strikethrough = 1
8 let g:vim_markdown_automerge = 1
9 let g:vim_markdown_edit_url_in = 'tab'
10 let g:vim_markdown_follow_anchor = 1
```

In addition to the rest of the awesome features, the main one I wanted is the last: `follow_anchor`. With this, I can create internal links within the same markdown document and jump between them with `ge`. It also lets me open both files and URLs from within Vim and without ever having to reach for the mouse.

General Vim things

Other, more general Vim settings that I use globally but might also be nice for editing markdown

```
1 " Have lines wrap instead of continue off-screen
2 set linebreak
3
4 " Gives Vim access to a broader range of colours
5 set termguicolors
6
7 " Converts tabs to spaces
8 set expandtab
9
10 " Use two spaces instead of tabs
11 set tabstop=2
12
13 " The same but for indents
14 set shiftwidth=2
15
16 " Keep cursor in approximately the middle of the screen
17 set scrolloff=12
18
19 " Disable mouse support
20 set mouse=
```

In all, I'm hoping that the work I've done today for improving my markdown workflow will help me create a more effective Zettelkasten. The *big* thing was really being able to follow internal links around because that's the main thing with keeping a Zettelkasten: following your ideas to see where they lead and discovering what connections you can make to form entirely new ideas. Mine will be stored in [Gitea](#) for now but I'm thinking about putting it here at some point. It would be cool to have a map of my own mind very easily accessible from anywhere.

```

# 20200527T113245
Topic: learning, efficiency, school, university, eastern, understanding
When learning a new subject, it's best to have a map of all the content you
need to know. When creating this map don't worry about slipping into the topic
at all; the only thing you're looking for is a rough overview. From there,
start going through each section and practicing. In subjects that have practice
problems, do these. In subjects that don't, you can often get away with mostly
skipping this part. Practicing will reveal your weaknesses and expose areas
that need more work. For these, what you need to do is break it down and
explain the entire process to someone else orally. This will reveal further
weaknesses and very likely lead to specific aspects that can be researched.
When these reveal the same process, it seems like it's a lot of work but it
really isn't and will lead to a deeper and longer understand of the subject.

Topic: reading, learning, efficiency, understanding
Building on the concept of understanding (see related), reading can be
obtained as well. During the coverage phase, take a look at the table of
contents and pick out sections you're interested in. Read through those
sections and take note of statements/phrases/passages that stick out
to you. Do this and read them but only those portions and only read entire
passages if you're certain you need to. Read slowly for understanding
understanding. Take notes as you go. Once you're finished and before you move
on to something else, reread your notes; this is where you gain the most
understanding. If you need to expand the content, do so. If you find that
something is in several, do so. Finally, go through some of your Zettelkasten
to connect notes and start building new ideas.

Edit

Time stamps

- 1 " Insert timestamp at the end of the line in this format:
20200527T113245
- 2 nnoemap <C-t><C-s> m'A<C-R>=strftime('%Y%m%dT%H%M%S')<CR>

Portable autocmds

Put all the autocmd lines in the if statement so they don't throw errors when the config is added to a version of vim without autocmd support

- 1 " Only enable autocommands when Vim supports them
- 2 if has("autocmd")
- 3 "
- 4 " Markdown Configuration

```
5  ""
6  " Spellcheck in British English
7  autocmd FileType markdown setlocal spell spelllang=en_gb
8  " Automatically open Goyo
9  autocmd FileType markdown Goyo
10 " Hide plaintext formatting and use color instead
11 autocmd FileType markdown set conceallevel=3
12 " Disable cursor line and column highlight
13 autocmd FileType markdown set nocursorline
14 autocmd FileType markdown set nocursorcolumn
15 endif
```

I won't keep editing this post to provide updates on my config. Instead, I recommend looking at my [“production” version on Gitea](#).

This was posted as part of [#100DaysToOffload](#), an [awesome idea](#) from [Kev Quirk](#). If you want to participate, just write something every day for 100 days and post a link on social media with the hashtag!
